Cockfighting Club

Modernizing a traditional sport through AI technology, entertainment, and international professional standards to elevate the cockfighting industry into a form of "soft power," thereby generating stable income for cockfighting farmers.

PRESENTED BY NATTHAKORN SINAMNUAIPHON

& TORBUNYARIT ISRAPAKDEERAT

Team Member

Behind Cock Cluck lies a team that combines real-world industry experience with cutting-edge AI technology.

A Computer Engineering student at Kasetsart University, raised in a family that has operated a cockfighting arena for over 20 years.

Nattakorn Sinamnuaiporn

— Founder and CEO

Torbunyarit Isarapakdeerat

— AI and Software Engineer

About Us

I grew up in this industry.

My family's arena has been part of Thailand's gamefowl community for over 20 years.

While the Thai breeding industry alone is worth more than **10 billion baht**, I kept asking myself one question:

Why are the farmers who create this value still struggling to build sustainable income?

The deeper I looked, the clearer the problems became.

Outdated competition formats.

Fragmented audiences.

Limited animal welfare standards.

And no digital infrastructure to move the industry forward.

That's why I founded Cock Cluck.

Not to defend the old system.

But to reinvent it.

The Problem

Matches depend on betting

"Breeders take on huge financial risk. One injury can erase years of work and savings."

Animal Welfare Concerns

"No standardized protections. Fights continue until one rooster is severely injured or dies."

Billions in value, but no digital home

The industry is fragmented, with no shared platform or digital infrastructure for fans, breeders, and organizers.

The solution

Changing the Rules

Instead of betting, we reward performance through sponsor-funded tournaments.

Farmers earn prize money by winning, creating long-term value instead of one-off gambling.

AI-Powered Safety

Computer Vision monitors animal health in real time with veterinary oversight.

Matches are limited to 3 rounds, and winners are determined by performance scores.

One Unified Platform

Cock Cluck is the ecosystem for official livestreams, community engagement, and verified knowledge.

It also delivers data-driven insights that keep audiences connected and informed.

Sponsorship-Driven Tournament

Revolutionizing the competition with a new format.

The competition is organized in a tournament format that awards prizes and bonuses instead of traditional betting, thereby shedding the old image associated with wagering and providing grassroots farmers with an equal opportunity to create value for their rooster.

1 No Bets from Owners

Sponsors fund the competitions, eliminating direct financial risk.

2 Tournament Format

The competition consists of just three rounds, utilizing AI to analyze and tally scores to determine the winner, ensuring transparency.

3 International Sport

Elevating cockfighting into a professional sport meeting international standards will attract enthusiasts from around the world, helping to build a solid foundation and generate sustainable revenue for the Thai cockfighting industry.

Safety First

Animal welfare is the central pillar of our operation — strict protocols ensure integrity in every competition.

1 Veterinary Team in the Ring

Veterinarians monitor each animal throughout the competition, assessing condition in real time. and Medical teams have full authority to stop any match with a risk of serious injury.

2 Smart Assistant

Supported by an AI-driven computer vision system, the setup continuously monitors the animals' health and analyzes performance in real-time, relaying data to the veterinary and Cutman teams so they can accurately assess conditions and provide targeted treatment.

3 Change in risk

The goal is to identify the best performer—before unnecessary injuries occur. Farmers invest a significant amount of time in breeding high-quality gamecocks, yet a single match can result in the loss of the value they have painstakingly built up; therefore, this method helps mitigate risks regarding the animal's safety and the potential loss of its value.

Platform: Community & Live Stream

A complete digital ecosystem

The first vertical platform dedicated to the professional cockfighting universe, connecting fans, breeders, and sponsors in one place.

→ Engaged Community

Space for enthusiasts to connect, discuss, and negotiate specimens.

→ Official Streaming

Live broadcasts of all tournaments with professional production.

→ Global Reach

Overcomes geographic limitations and brings the sport to new audiences.

Revenue Model: Subscription & Market Size

Pricing Strategy: 100\$ / User / Year

TAM

\$15.0
Billion

Total audience in worldwide(8 country)

150 million people

SAM

\$9.0
Billion

Asian cockfighting audience

90 million people

SOM

\$260+
Million

Thai audience(Only chicken farmer)

2.6 million people

Live Product

Market Ready

"Unlike most student startups, Cock Cluck is already live, We started with a real arena, real users, and real revenue."

Solid Foundation

"We already have 82 paying subscribers before launching our AI product."

AI-Powered

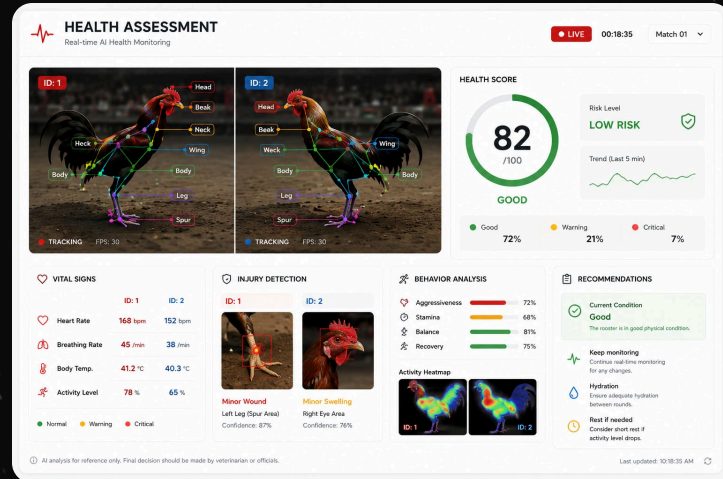

"Our AI Computer Vision MVP is the foundation of a new, data-driven competition system."
